

## Keyman Keyboard Usage Instructions

Please make sure that Keyman is already running in your machine. This can be seen by the small keyboard key-like icon in the taskbar.

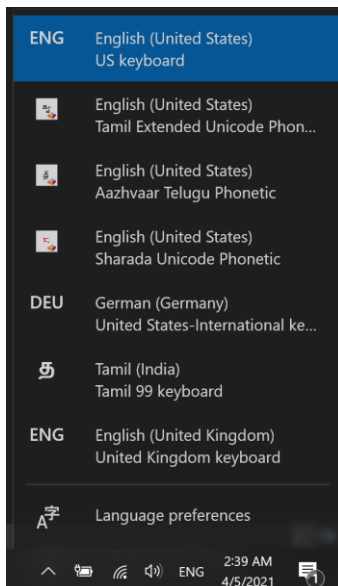

In some cases, the icon could be hidden as shown below;

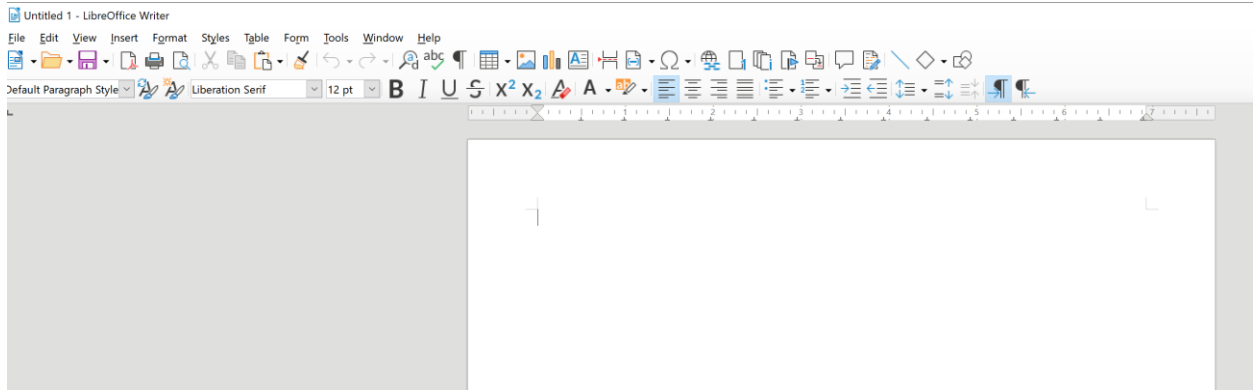

If you cannot see the icon, please start Keyman.

With Keyman running, you should be able to see the Sharada Unicode Phonetic keyboard by clicking on the language icon (that most probably says ENG).

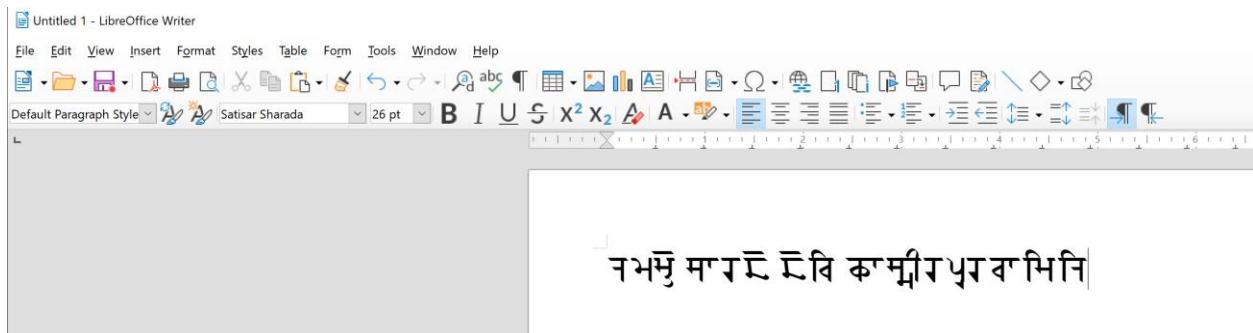

Open LibreOffice Writer. Unfortunately, Sharada is not yet properly supported in Microsoft Office. If you don't have LibreOffice installed, please install it.

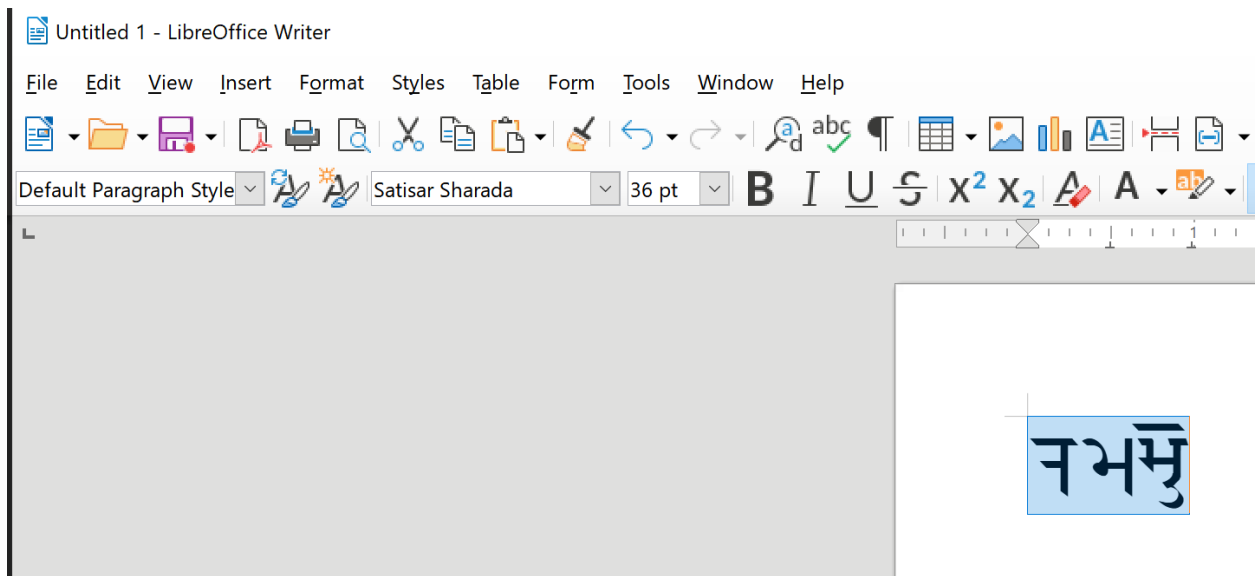

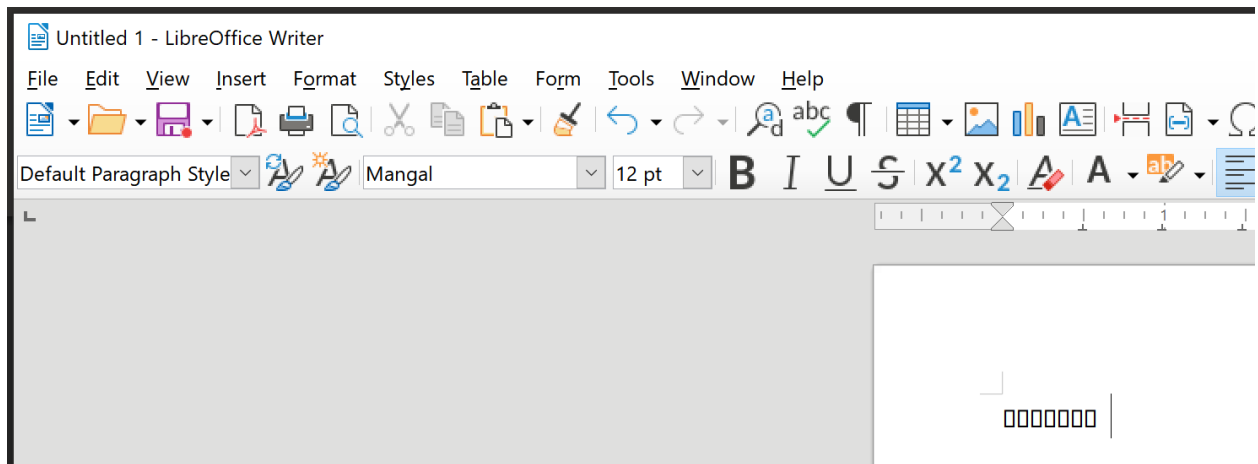

Using the language menu as shown above, set the Keyboard to “Sharada Unicode Phonetic”. You can also invoke the language menu using windows key + space bar.

You can now compose text. Make sure the font is properly set as Satisar Sharada.

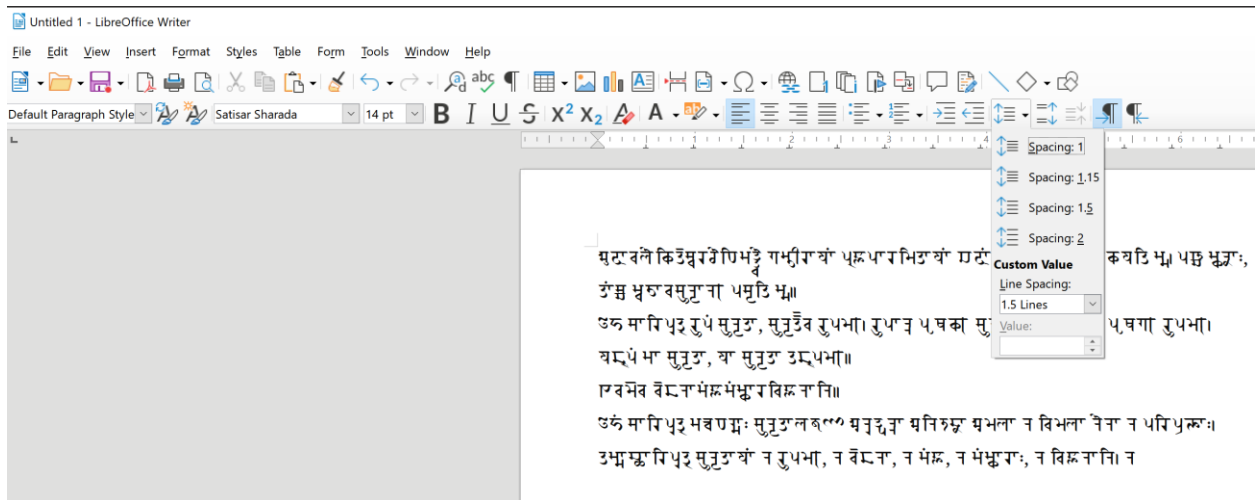

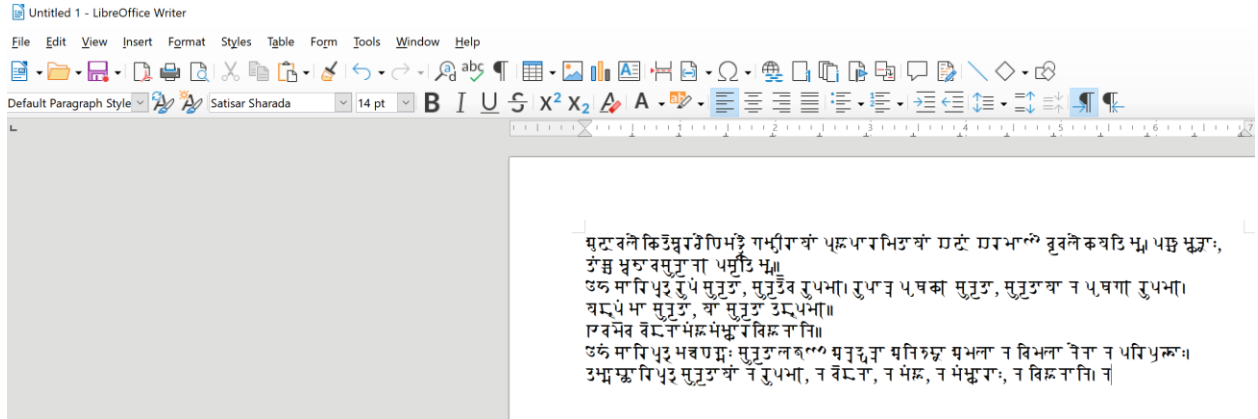

Sometimes, the font may revert back to something else. In this case, the text may appear as boxes. Please select the text and set the font again as “Satisar Sharada”.

You should now be able to type in Sharada without any font issues

To ensure proper legibility and to avoid overcrowding of text, please sufficiently increase the line-spacing.

The keyboard mapping can be found under the start menu within the folder “Sharada Keyboard”.
